

My first LaTeX Doc

Diego Martinez*

4/19/2025

First document. This is a simple example, with no extra parameters or packages included. Now I have added more text and need to recompile the document.

We now have our first L^AT_EX doc.

Some of the **greatest** discoveries in science were made by ***accident***.

Some of the *greatest* discoveries in science were made by accident.

Some of the greatest discoveries in science were made by accident.

Some of the greatest *discoveries* in science were made by accident.

The universe is immense and it seems to be homogeneous, on a large scale, everywhere we look.

Theres a picture of the galaxy above.

*Funded by the VS code lmao.

Figure 1: A nice plot.

As you can see in figure 1, the function grows near the origin. This example on the page 2.

Unordered lists

- The individual entries are indicated with a black dot, a so-called bullet.
- The text in the entries may be of any length.

Ordered Lists

1. This is the first entry in our list.
2. The list increase with each entry we add.

In physics, the mass-energy equivalence is stated by the equation $E = mc^2$, discovered in 1905 by Albert Einstein.

$E = mc^2$ is typeset in a paragraph using inline math mode—as is $E = mc^2$ and so too is $E = mc^2$.

The mass-energy equivalence is described by the famous equation

$$E = mc^2$$

discovered in 1905 by Albert Einstein.

In natural units ($c = 1$), the formula expresses the identity

$$E = m \tag{1}$$
